

## South Dakota State University Research Computing

The UNSS Research Computing Group serves the faculty and staff of SDSU by providing assistance to researchers in engineering, science and other disciplines that require large scale computational resources.

### **Our goals are to:**

- Provide flexible and varied capacity for large scale computational problems.
- Make high performance computing easier and more productive to use.
- Foster the development of new generations of high performance computing systems and technology.
- Make high performance computing readily available to researchers that need it to fulfill their missions.
- Provide needed technical human resources to support the high performance computing environment.
